Encountering Algebra Cecilia Kilhamn 2019-07-03 The book reports a comparative research project about algebra teaching and learning in four countries. Algebra is a central topic of learning across the world, and it is well-known that it represents a hurdle for many students. The book presents analyses built on extensive video-recordings of classrooms documenting the first introduction to symbolic algebra (students aged 12 to 14). While the content addressed in all classrooms is variables, expressions and equations, the teaching approaches are diverse. The chapters bring the reader into different algebra classrooms, discussing issues such as mathematization and social norms, the role of mediating tools and designed examples, and teacher beliefs. By comparing classrooms, new insights are generated about how students understand the algebraic content, how teachers instruct, and how both parties deal with difficulties in learning elementary algebra. The book also describes a research methodology using video in search of taken-for-granted aspects of algebra lessons.

Fifty Years of Change on the U.S.-Mexico Border Joan B. Anderson 2009-08-17 The U.S. and Mexican border regions have experienced rapid demographic and economic growth over the last fifty years. In this analysis, Joan Anderson and James Gerber offer a new perspective on the changes and tensions pulling at the border from both sides through a discussion of cross-border economic issues and thorough analytical research that examines not only the dramatic demographic and economic growth of the region, but also shifts in living standards, the changing political climate, and environmental pressures, as well as how these affect the lives of people in the border region. Creating what they term a Border Human Development Index, the authors rank the quality of life for every U.S. county and Mexican municipio that touches the 2,000-mile

border. Using data from six U.S. and Mexican censuses, the book adeptly illustrates disparities in various aspects of economic development between the two countries over the last six decades. Anderson and Gerber make the material accessible and compelling by drawing an evocative picture of how similar the communities on either side of the border are culturally, yet how divided they are economically. The authors bring a heightened level of insight to border issues not just for academics but also for general readers. The book will be of particular value to individuals interested in how the border between the two countries shapes the debates on quality of life, industrial growth, immigration, cross-border integration, and economic and social development.

Decision Processes in Visual Perception D. Vickers 2014-06-28 Decision Processes in Visual Perception explores the relationships between the organization of a complex visual pattern by the perception system and the molecular activity involved in the discrimination of differences in magnitude or intensity between two stimulus elements. The text discusses the basic principles of discrimination, identification, and self-regulation of the perception system; demonstrates how adaptive decision modules emerge from multiple constraints; shows how combinations of simple decisions lead to complex judgmental tasks; and synthesizes traditional approaches to perception in order to clarify the crucial and pervasive role of these modules in the overall activity of perceptual organization. Psychologists, neuroscientists, molecular biologists, and physiologists will find the book invaluable.
