Exploring the World of Alligators and Crocodiles Tracy Read 2017-09-07
Silently suspended in water, with only their eyes, nostrils and ears breaking the surface, these members of the crocodylian family play a terrifying sit-and-wait game with their prey, striking with lightning speed, chilling accuracy and a deadly bite stronger than any other living creature. Their victims stand little chance once held in their strong jaws. Land-dwelling prey are equally at risk--crocodylians can walk, gallop and leap at high speed, making them among nature's fiercest predators. The crocodile and alligator families descend from the reptiles that roamed Earth alongside the dinosaurs some 250 million years ago. Today, most of the land-dwelling crocodylians live in tropical lowlands, while the broad-snouted American and Chinese alligators have adapted to cooler temperatures. In Exploring the World of Alligators and Crocodiles, young readers will learn about the crocodylians' life history, physical characteristics, courtship displays, communication strategies and family life.
