New Developments in Productivity Analysis

Charles R. Hulten 2007-11-01 The productivity slowdown of the 1970s and 1980s and the resumption of productivity growth in the 1990s have provoked controversy among policymakers and researchers. Economists have been forced to reexamine fundamental questions of measurement technique. Some researchers argue that econometric approaches to productivity measurement usefully address shortcomings of the dominant index number

techniques while others maintain that current productivity statistics underreport damage to the environment. In this book, the contributors propose innovative approaches to these issues. The result is a state-of-the-art exposition of contemporary productivity analysis. Charles R. Hulten is professor of economics at the University of Maryland. He has been a senior research associate at the Urban Institute and is chair of the Conference on Research in Income and Wealth of the National Bureau of Economic Research. Michael Harper is chief of the Division of Productivity Research at the Bureau of Labor Statistics. Edwin R. Dean, formerly associate commissioner for Productivity and Technology at the Bureau of Labor Statistics, is adjunct professor of economics at The George Washington University.

Translational Acupuncture Research

Ying Xia 2019-05-28 Written by many scientists and clinicians from China, USA, Canada and other countries, this monograph discusses

translational research on acupuncture. Besides general topics on acupuncture practice (e.g., different styles and techniques of acupuncture), topics include some refractory diseases such as chronic fatigue syndrome, Parkinson's disease, cardiovascular dysfunction, chronic pain, post-concussion syndrome and post-traumatic stress disorder and cancer-related symptoms. The factors influencing acupuncture research are comprehensively addressed in the final chapter. This unique book provides a translational perspective on modern acupuncture for not only acupuncturists, but also neuroscientists, neurologists, and other clinicians. For medical students and undergraduate and graduate students majoring in biology, this book is an advanced course for learning the progress in alternative and complementary Medicine.

Bioadhesives in Drug Delivery K. L. Mittal
2020-05-26 This important and unique book comprises 12 chapters divided into three parts examining the fundamental aspects, bioadhesive

formulations, and drug delivery applications. Understanding the phenomenon of bioadhesion i.e. its theories or mechanism(s) are of critical importance in developing optimum bioadhesive polymers (used in bioadhesives). Such bioadhesive polymers are the key for exhibiting the process of bioadhesion, controlled/sustained release of drugs, and drug targeting. The use of bioadhesives restricts the delivery system to the site of interest and thus offers a useful and efficient technique for targeting a drug to the desired location for a prolonged duration. This book addresses the various relevant aspects of bioadhesives in drug delivery in an easily accessible and unified manner. The book containing 12 chapters written by eminent researchers from many parts of the globe is divided into three parts: Part 1: Fundamental Aspects; Part 2: Bioadhesive Formulations; Part 3: Drug Delivery Applications. The topics covered include: Theories and mechanisms of bioadhesion; bioadhesive polymers for drug

delivery applications; methods for characterization of bioadhesiveness of drug delivery systems; bioadhesive films and drug delivery applications; bioadhesive nanoparticles; bioadhesive hydrogels and applications; ocular bioadhesive drug delivery systems; buccal bioadhesive drug delivery systems; gastrointestinal bioadhesive drug delivery systems; nasal bioadhesive drug delivery systems; vaginal drug delivery systems; pulmonary bioadhesive drug delivery systems.

Re-Imagining the End of Life Janet Booth

2019-04-18 What does it mean to be prepared for the last part of our lives? One of the many lessons author and end-of-life nurse coach Janet Booth learned at the bedside of dying people is how painful it is to come unprepared to the end of life, whether it is our own or that of our loved ones. Much of the suffering we experience seems to come from our unfamiliarity with the journey at end of life and our not knowing how to prepare for it. So there is a need for a different kind of conversation about serious illness and dying in our country. Nurses are trusted professionals who are present with people through all of life's transitions. How might they take more leadership in these conversations? The purpose of this handbook is to provide nurses, coaches, and other health care professionals with opportunities for reflection and inspiration in their work. As nurses and health care professionals, many of us have seen firsthand that the process of navigating serious illness and death within our

complex health care system is often confusing, isolating, crisis-driven, and dis-heartening. What outcomes might be possible if instead: * we reimagined the end of life as a vital, purposeful stage of human development? * practices of healing - forgiveness, gratitude, and letting go - became essential parts of our care plans? * wisdom instead of fear informed our challenging decision points? * we prepared for death in order to live more fully the time that we have? * the hard work of caregiving was sustainable and meaningful for both family and professional caregivers? In this book you will find fresh ideas, tools, and reflective practices that encourage you to explore your personal beliefs and values about aging, advanced illness, and dying. It is intended to inspire you to reimagine the end of life as a vital part of how we become fully human - a time of life that holds value, meaning, and purpose.

Medical Care Output and Productivity David M. Cutler 2001 With the United States and other

developed nations spending as much as 14 percent of their GDP on medical care, economists and policy analysts are asking what these countries are getting in return. Yet it remains frustrating and difficult to measure the productivity of the medical care service industries. This volume takes aim at that problem, while taking stock of where we are in our attempts to solve it.

Hard-to-Measure Goods and Services Ernst R. Berndt 2009-02-15 The celebrated economist Zvi Griliches's entire career can be viewed as an attempt to advance the cause of accuracy in economic measurement. His interest in the causes and consequences of technical progress led to his pathbreaking work on price hedonics, now the principal analytical technique available to account for changes in product quality. **Hard-to-Measure Goods and Services**, a collection of papers from an NBER conference held in Griliches's honor, is a tribute to his many

contributions to current economic thought. Here, leading scholars of economic measurement address issues in the areas of productivity, price hedonics, capital measurement, diffusion of new technologies, and output and price measurement in "hard-to-measure" sectors of the economy. Furthering Griliches's vital work that changed the way economists think about the U.S. National Income and Product Accounts, this volume is essential for all those interested in the labor market, economic growth, production, and real output. **Census of India, 1991: Dungarpur** 1994 **Measuring Capital in the New Economy** Carol Corrado 2009-02-15 As the accelerated technological advances of the past two decades continue to reshape the United States' economy, intangible assets and high-technology investments are taking larger roles. These developments have raised a number of concerns, such as: how do we measure intangible assets? Are we accurately appraising newer, high-

technology capital? The answers to these questions have broad implications for the assessment of the economy's growth over the long term, for the pace of technological advancement in the economy, and for estimates of the nation's wealth. In *Measuring Capital in the New Economy*, Carol Corrado, John Haltiwanger, Daniel Sichel, and a host of distinguished collaborators offer new approaches for measuring capital in an economy that is increasingly dominated by high-technology capital and intangible assets. As the contributors show, high-tech capital and intangible assets affect the economy in ways that are notoriously difficult to appraise. In this detailed and thorough analysis of the problem and its solutions, the contributors study the nature of these relationships and provide guidance as to what factors should be included in calculations of different types of capital for economists, policymakers, and the financial and accounting communities alike.

The Grace in Aging Kathleen Dowling Singh
2014-08-05 Learn to use your later years for awakening and spiritual growth. Encouraging, inspiring, and practical, *The Grace in Aging* invites all those who have ever experienced spiritual longing to awaken in their twilight years. Since aging, in and of itself, does not lead to spiritual maturity, *The Grace in Aging* suggests and explores causes and conditions that we can create in our lives, just as we are living them, to allow awakening to unfold -- transforming the predictable sufferings of aging into profound opportunities for growth in clarity, love, compassion, and peace. Kathleen Dowling Singh streamlines vast and complex teachings into skillful means and wise views. Straightforward language and piercing questions bring Singh's teachings into the sharp focus of our own lives; the contemplative nature of each chapter allows for an uncommon depth of inquiry. Examples from our lives and from the chatter in our own minds touch the reader

personally, offering the chance to absorb the implications deeply and do the work of freeing his or her own mind. Ecumenical in spirit, tone, and language, Singh offers wisdom from teachers from a variety of spiritual backgrounds: Thich Nhat Hanh, the Apostles, Annie Dillard, and more. Lessening our attachments, decreasing our aversions, unbinding what binds us, we bear witness to the possibility of awakening for all beings. The Grace in Aging offers guidelines for older individuals of any wisdom tradition who wish to awaken before they die; no need for caves or seven-year retreats. This is spiritual practice for the lives we live.

Education, Skills, and Technical Change Charles R. Hulten 2018-12-26 Over the past few decades, US business and industry have been transformed by the advances and redundancies produced by the knowledge economy. The workplace has

changed, and much of the work differs from that performed by previous generations. Can human capital accumulation in the United States keep pace with the evolving demands placed on it, and how can the workforce of tomorrow acquire the skills and competencies that are most in demand? *Education, Skills, and Technical Change* explores various facets of these questions and provides an overview of educational attainment in the United States and the channels through which labor force skills and education affect GDP growth. Contributors to this volume focus on a range of educational and training institutions and bring new data to bear on how we understand the role of college and vocational education and the size and nature of the skills gap. This work links a range of research areas—such as growth accounting, skill development, higher education, and immigration—and also examines how well students are being prepared for the current and future world of work.

Adhesion in Pharmaceutical, Biomedical, and Dental Fields K. L. Mittal 2017-06-23 The phenomenon of adhesion is of cardinal importance in the pharmaceutical, biomedical and dental fields. A few eclectic examples will suffice to underscore the importance/relevance of adhesion in these three areas. For example, the adhesion between powdered solids is of crucial importance in tablet manufacture. The interaction between biodevices (e.g., stents, bio-implants) and body environment dictates the performance of such devices, and there is burgeoning research activity in modifying the surfaces of such implements to render them compatible with bodily components. In the field of dentistry, the modern trend is to shift from retaining of restorative materials by mechanical interlocking to adhesive bonding. This unique book addresses all these three areas in an easily accessible single source. The book contains 15 chapters written by leading experts and is divided into four parts: General Topics; Adhesion

in Pharmaceutical Field; Adhesion in Biomedical Field; and Adhesion in Dental Field. The topics covered include: - Theories or mechanisms of adhesion. - Wettability of powders. - Role of surface free energy in tablet strength and powder flow behavior. - Mucoadhesive polymers for drug delivery systems. - Transdermal patches. - Skin adhesion in long-wear cosmetics. - Factors affecting microbial adhesion. - Biofouling and ways to mitigate it. - Adhesion of coatings on surgical tools and bio-implants. - Adhesion in fabrication of microarrays in clinical diagnostics. - Antibacterial polymers for dental adhesives and composites. - Evolution of dental adhesives. - Testing of dental adhesives joints.

Voluntarily Stopping Eating and Drinking
 Timothy E. Quill 2021-07-27 In the 21st century, people in the developed world are living longer.

They hope they will have a healthy longer life and then die relatively quickly and peacefully. But frequently that does not happen. While people are living healthy a little longer, they tend to live sick for a lot longer. And at the end of being sick before dying, they and their families are frequently faced with daunting decisions about whether to continue life prolonging medical treatments or whether to find meaningful and forthright ways to die more easily and quickly. In this context, some people are searching for more and better options to hasten death. They may be experiencing unacceptable suffering in the present or may fear it in the near future. But they do not know the full range of options legally available to them. Voluntary stopping eating and drinking (VSED), though relatively unknown and poorly understood, is a widely available option for hastening death. VSED is legally permitted in places where medical assistance in dying (MAID) is not. And unlike U.S. jurisdictions where MAID

is legally permitted, VSED is not limited to terminal illness or to those with current decision-making capacity. VSED is a compassionate option that respects patient choice. Despite its strongly misleading image of starvation, death by VSED is typically peaceful and meaningful when accompanied by adequate clinician and/or caregiver support. Moreover, the practice is not limited to avoiding unbearable suffering, but may also be used by those who are determined to avoid living with unacceptable deterioration such as severe dementia. But VSED is "not for everyone." This volume provides a realistic, appropriately critical, yet supportive assessment of the practice. Eight illustrative, previously unpublished real cases are included, receiving pragmatic analysis in each chapter. The volume's integrated, multi-professional, multi-disciplinary character makes it useful for a wide range of readers: patients considering present or future end-of-life options and their families,

clinicians of all kinds, ethicists, lawyers, and institutional administrators. Appendices include recommended elements of an advance directive for stopping eating and drinking in one's future if and when decision making capacity is lost, and what to record as cause of death on the death certificates of those who hasten death by VSED.
