**The Competitive Ethos and Democratic Education**

John G. Nicholls 1989 Young children and even infants work hard at mastering various skills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society,

exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children.

Thoughtful Soccer Russ Carrington 2003-09 A

truly innovative model for coaching and playing soccer in which the thought side of the game is as important as the skills and players begin thinking early in their development. The key to the Thoughtful Soccer picture is unpredictability. Players might pass, shoot or dribble. They might move the ball forward, back or to the side. And they might attack quickly or advance the ball patiently. Observers, as well as opponents, cannot predict what is going to happen. That is what makes Thoughtful Soccer so enjoyable to watch. Perfect for both new and experienced coaches and players, this unique method will benefit teams at all levels of the game. Book jacket.

The God Equation Michio Kaku 2021-04-06 #1  
NEW YORK TIMES BESTSELLER • The epic story of the greatest quest in all of science—the holy grail of physics that would explain the creation of the universe—from renowned theoretical physicist and author of *The Future of the Mind* and *The Future of Humanity*. When Newton discovered the law of gravity, he unified the rules governing the heavens and the Earth. Since then, physicists have been placing new forces into ever-grander theories. But perhaps the ultimate challenge is achieving a monumental synthesis of the two remaining theories—relativity and the quantum theory. This would be the crowning achievement of science, a profound merging of all the forces of nature into one beautiful, magnificent equation to unlock the deepest mysteries in science: What happened before the Big Bang? What lies on the other side of a black hole? Are there other universes and dimensions? Is time travel possible? Why are we here? Kaku also explains

the intense controversy swirling around this theory, with Nobel laureates taking opposite sides on this vital question. It is a captivating, gripping story; what's at stake is nothing less than our conception of the universe. Written with Kaku's trademark enthusiasm and clarity, this epic and engaging journey is the story of *The God Equation*.

Throw the Ball High Mickey Crowley 2022-02-03  
No doubt about it, there was a time when Mickey Crowley was the busiest man in basketball. A legendary, world-class referee with a reputation for humor, fairness, and getting the call right, Mickey always has been a man in motion. He officiated dozens of college games annually from 1962 until 1991. His last game was the NCAA championship battle between Duke and Kansas. A member of six halls of fame, Mickey was on the ground floor in the 1980s when the Big East emerged as the nation's premier basketball conference. His face was a fixture at Madison Square Garden. Known for his

quick wit, Mickey for years has told stories of his biggest games and coaches like Lou Carnesecca, John Thompson, P. J. Carlesimo, John Chaney, Mike Krzyzewski, Rick Pitino, and Bob Knight. Michael Jordan, Patrick Ewing, Shaquille O'Neal, Chris Mullin, and Lew Alcindor (Kareem Abdul-Jabbar) are among the more notable players Mickey has seen up close since he began his officiating career in 1957. Mickey also ran one of the nation's top basketball camps for referees for nearly forty years. He traveled the world officiating games, notably in Puerto Rico, Uruguay, and Yugoslavia. Among his many stops was a stage in Las Vegas, where he once sang a duet with Suzanne Somers. Being a referee was Mickey's part-time job. For years, his full-time job was as a Nassau County administrator who assigned officials for hundreds of high school, college, and junior college sporting events. A native of Queens, New York, he served in the army, drove a truck, tended bar, managed a baseball team, and fathered a family. Now, he

*Concussion and Traumatic Encephalopathy* Jeff Victoroff 2019-02-28 Concussion and Traumatic Encephalopathy is a ground breaking text that offers neurologists, neuropsychologists, psychologists, and physiatrists the first comprehensive reconceptualization of concussive brain injury in 100 years. During the twentieth century, progress in understanding concussion was hamstrung by resistance to the observation that many survivors suffer long-term sequelae, and by the lack of advanced neuroimaging technologies. As a result, the potentially immense impact of concussion on global health was largely overlooked. The last decade has witnessed a dramatic renaissance in concussion science. We are just beginning to fathom the implications for society. Informed by twenty-first century advances, this new text updates the definition, epidemiology, pathophysiology, late effects, and promising therapies for concussion. Multiple experts have

collaborated to summarize the latest scientific evidence in an engaging way and provide the reader with the first paradigm shifting textbook of this new era.

**Dietary Reference Intakes** Institute of Medicine 1999-04-07 The model for risk assessment of nutrients used to develop

tolerable upper intake levels (ULs) is one of the key elements of the developing framework for Dietary Reference Intakes (DRIs). DRIs are dietary reference values for the intake of nutrients and food components by Americans and Canadians. The U.S. National Academy of Sciences recently released two reports in the series (IOM, 1997, 1998). The overall project is a comprehensive effort undertaken by the Standing Committee on the Scientific Evaluation of Dietary Reference Intakes (DRI Committee) of the Food and Nutrition Board (FNB), Institute of Medicine, National Academy of Sciences in the United States, with active involvement of Health Canada. The DRI project is the result of significant discussion from 1991 to 1996 by the FNB regarding how to approach the growing concern that one set of quantitative estimates of recommended intakes, the Recommended Dietary Allowances (RDAs), was scientifically inappropriate to be used as the basis for many of the uses to which it had come to be applied.

**Sports-Related Concussions in Youth**

National Research Council 2014-02-04 In the past decade, few subjects at the intersection of

medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences -

including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes

devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.
