Paramedic Heretic: Immutable Laws and Ethical Illusions K. Patrick McDonald 2014-12-08
At one point during our lunch the famous Sonny Bono asked, "So in other words, we've reached a point where a rescuer can't say 'screw the rules' and just do the right thing?" Not in other words, Sonny. Those are the perfect words. Immutable Law #2 Saving lives is not our priority. Following our policies is our priority. Protecting ourselves comes next. Avoiding lawsuits comes third. You

It would not be my last - Lord, no - but I can recall that night as vividly as though it happened last week. Few medics forget their first physician homicide. * * * The ugly truth is some of the most macho medics on the planet turn into complete lollipops in the presence of an arrogant, incompetent physician. No matter how you parse it, that is professional cowardice. * * * K. Patrick McDonald is a graduate of UCSD La Jolla School of Medicine original Advanced Field Medicine program. He was appointed the first EMS Supervisor for the City of San Diego under Mayor (and then Governor) Pete Wilson's administration. He created one of the nation's first STAR (Special Trauma & Rescue) Teams and co-authored the San Diego City Disaster Preparedness Plan. He was a co-author of the National Waterpark Lifeguard Training Manual. He has acted as consultant to the U.S. Secret Service in Presidential Protection matters. It's about Skiing and Not the Skis Jay Eacker 2010 People have been skiing—and no doubt teaching others to do the same—for thousands of years. The earliest evidence for it is a picture on the wall of a cave in Norway that was drawn sometime around 4500 BC. Skiing is something that we do. It is a behavior. Teaching others to ski is also something that we do. It, too, is a behavior. Pavlov and his dog helped to demonstrate that behavior is lawful and orderly. Various forms of conditioning as well as reinforcement, generalization, discrimination, punishment, and extinction change behavior. But why do we ski and teach others to do the same? These behaviors can also be accounted for, but no one has done it—until now. Develop a better understanding of why we ski and become a better skier or ski instructor in the process. You'll gain a greater appreciation of the sport once you discover *It's About Skiing and Not the Skis*.

PV Charging and Storage for Electric Vehicles Pavol Bauer 2021-09-02
 Electric vehicles are only 'green' as long as the source of electricity is 'green' as well. At the same time, renewable power production suffers from diurnal and seasonal variations, creating the need for energy storage technology. Moreover, overloading and voltage problems are expected in the distributed network due to the high penetration of distributed generation and increased power demand from the charging of electric vehicles. The energy and mobility transition hence calls for novel technological innovations in the field of sustainable electric mobility powered from renewable energy. This Special Issue focuses on recent advances in technology for PV charging and storage for electric vehicles.

sEMG-based Control Strategy for a Hand Exoskeleton System

Nicola Secciani 2021-11-22 This book reports on the design and testing of an sEMG-based control strategy for a fully-wearable low-cost hand exoskeleton. It describes in detail the modifications carried out to the electronics of a previous prototype, covering in turn the implementation of an innovative sEMG classifier for predicting the wearer's motor intention and driving the exoskeleton accordingly. While similar classifier have been widely used for motor intention prediction, their application to wearable device control has been neglected so far. Thus, this book fills a gap in the literature providing readers with extensive information and a source of inspiration for the future design and control of medical and assistive devices.
