Business Cycles in Economic Thought Alain Alcouffe 2017-01-06 Business Cycles in Economic Thought underlines how, over the time span of two centuries, economic thought interacted with cycles in a continuous renewal of theories and rethinking of policies, whilst economic actions embedded themselves into past economic thought. This book argues that studying crises and periods of growth in different European countries will help to understand how different national, political and cultural traditions influenced the complex interaction of economic cycles and economic theorizing. The editors of this great volume bring together expert contributors consisting of economists, historians of economic thought and historians of economics, to analyse crises and theories of the nineteenth and the twentieth century. This is alongside a comprehensive outlook on the most relevant advances of economic theory in France, Germany and Italy, as well as coverage of non-European countries, such as the United States. Several of the highly prestigious Villa Vigoni Trilateral Conferences formed the background for the discussions in this book. This volume is of great interest to students and academics who study history of economic thought, political economy and macroeconomics.

Classical Political Economy William O. Thweatt 2013-03-09 William O. Thweatt This book is the second in three surveys of the literature in the history of economic thought in the Kluwer Recent Economic Thought series. The first book, covering the pre-classical literature, has already been published; a third, on the neo-classical period, is planned for 1988. This middle book surveys the writings on classical political economy for the past 30 years, or roughly since the publication of Joseph Schumpeter's 1954 monumental History of Economic Analysis. Shortly after World War II, the American Economic Association sponsored a Survey of Contemporary Economics [1949]. That work covered 13 subdisciplines of economics, and in 1952 a companion piece appeared in which surveys of 10 additional subdisciplines were presented. As Bernard Haley, editor of the second volume, stated, even "though in the two volumes twenty-three fields have been treated ... there remain some aspects of the subject ... that have not been reviewed" [Haley, 1952, p. v]. **Classics in institutional economics II : succeeding generations, 1916 - 1978. 1 (1998)** Malcolm Rutherford 1998

Pre-Classical Economic Thought S. Todd Lowry 2012-12-06 The scholars invited to contribute the primary essays for this collection were given three mandates. The first was to survey the contemporary research in their assigned fields and to provide a bibliography that would give any interested scholar an entree into the literature. The second was to develop their own interpretive perspective on the economic literature of their assigned period. The third, and perhaps the most difficult, was to be very brief and concise. In a project of this type it would be difficult to extrapolate themes or evolutionary sequences that run through the literature over the two thousand years spanned by this survey. To some degree, the invited commentators provide a fund of suggestions that will stimulate interested readers to pursue this line of synthesis for themselves. The editor of this collection did not even entertain the idea of trying to coordinate the presentations and commentaries of this intellectually erudite and diverse group of scholars into agreed upon lines of interpretation. There is enough material, however, to provide a reference base for the interested scholar who desires to follow particular ideas from period to period.

Understanding the Process of Economic Change Douglass C. North 2010-05-09 In this landmark work, a Nobel Prize-winning economist develops a new way of understanding the process by which economies change. Douglass North inspired a revolution in economic history a generation ago by demonstrating that economic performance is determined largely by the kind and quality of institutions that support markets. As he showed in two now classic books that inspired the New Institutional Economics (today a subfield of economics), property rights and transaction costs are fundamental determinants. Here, North explains how different societies arrive at the institutional infrastructure that greatly determines their economic trajectories. North argues that economic change depends largely on "adaptive efficiency," a society's effectiveness in creating institutions that are productive, stable, fair, and broadly accepted--and, importantly, flexible enough to be changed or replaced in response to political and economic feedback. While adhering to his earlier definition of institutions as the formal and informal rules that constrain human economic behavior, he extends his analysis to explore the deeper determinants of how these rules evolve and how economies change. Drawing on recent work by psychologists, he identifies intentionality as the crucial variable and proceeds to demonstrate how intentionality emerges as the product of social learning and how it then shapes the economy's institutional foundations and thus its capacity to adapt to changing circumstances. *Understanding the Process of Economic Change* accounts not only for past institutional change but also for the diverse performance of present-day economies. This major work is therefore also an essential guide to improving the performance of developing countries.

Challenging Health Economics Gavin Mooney 2009-01-22 This book mounts a critique of current health economics and provides a better way of looking at the economics of health and health care. It argues that health economics has been too dominated by the economics of health care and has largely ignored the impact of poverty, inequality, poor housing, and lack of education on health. It is suggested that some of the structural issues of economies, particularly the individualism of neo liberalism which is becoming more and more pervasive across the globe, need to be addressed in health economics. The author instead proposes a form of collective decision making through communitarianism, placing value on participation in public life and on institutions, such as health care. It is envisaged this form of decision making can be used at the local, national or global levels. For the last, this would mean a major revamp of global institutions like the World Bank and the IMF. Examples of the impact of the new paradigm on health policy in general but also more specifically on priority setting and equity are included.

Reviving the Invisible Hand Deepak Lal 2010-12-16 Reviving the Invisible Hand is an uncompromising call for a global return to a classical liberal economic order, free of interference from governments and international organizations. Arguing for a revival of the invisible hand of free international trade and global capital, eminent economist Deepak Lal vigorously defends the view that statist attempts to ameliorate the impact of markets threaten global economic progress and stability. And in an unusual move, he not only defends globalization economically, but also answers the cultural and moral objections of antiglobalizers.

Taking a broad cross-cultural and interdisciplinary approach, Lal argues that there are two groups opposed to globalization: cultural nationalists who oppose not capitalism but Westernization, and "new dirigistes" who oppose not Westernization but capitalism. In response, Lal contends that capitalism doesn't have to lead to Westernization, as the examples of Japan, China, and India show, and that "new dirigiste" complaints have more to do with the demoralization of their societies than with the capitalist instruments of prosperity. Lal bases his case on a historical account of the rise of capitalism and globalization in the first two liberal international economic orders: the nineteenth-century British, and the post-World War II American. Arguing that the "new dirigisme" is the thin edge of a wedge that could return the world to excessive economic intervention by states and international organizations, Lal does not shrink from controversial stands such as advocating the abolishment of these organizations and defending the existence of child labor in the Third World.
